

 1. Start with Problem (20–30 sec)

“Social media scams like phishing, impersonation, and fake investments are increasing rapidly. Existing solutions are mostly reactive and fail to detect scams early, especially AI-generated ones like deepfakes.”

 2. Introduce Your Solution (20 sec)

“To solve this, we built BlockMind, a real-time AI-powered system that detects scams on social media and securely stores evidence using blockchain.”

 3. Explain Architecture (Main Part – 1.5 to 2 min)

 Explain in flow format (VERY IMPORTANT) ♦ Step 1: Data Collection

“We collect real-time data from social media using APIs. This includes posts, messages, and media content.”

♦ Step 2: Preprocessing

“The data is cleaned and prepared. Text is tokenized, and images/videos are processed using computer vision techniques.”

♦ Step 3: AI Detection Engine

 Say this confidently (core part )

“We use a multi-modal AI approach:

NLP models like BERT analyze text for phishing patterns CNN models analyze images/videos for deepfakes Behavioral analysis detects suspicious user activity”

♦ Step 4: Risk Scoring

“All outputs are combined into a risk score to classify content as low, medium, or high risk.”

♦ Step 5: Alert System

“If a threat is detected, users get instant alerts through a dashboard.”

♦ Step 6: Blockchain Layer (Highlight )

“We store scam evidence on blockchain, making it tamper-proof and useful for legal investigation.”

 4. Highlight Innovation (30 sec – VERY IMPORTANT)

“What makes our system unique is:

Real-time detection instead of offline analysis

Multi-modal AI (text + image + behavior)

Blockchain integration for secure evidence

Explainable AI for transparency”

🎯 5. End with Impact (20 sec)

“BlockMind helps prevent financial loss, improves digital safety, and builds trust in social media platforms.”

🧠 SUPER SHORT VERSION (If time is less)

“BlockMind is a real-time AI system that detects social media scams using NLP, computer vision, and behavioral analysis, and stores tamper-proof evidence using blockchain.”

🔥 Pro Tips to Impress Judges

Use keywords:

“Real-time pipeline”

“Multi-modal AI”

“Risk scoring system”

“Blockchain immutability”

If asked “Why blockchain?” 👉 Say:

“To ensure evidence cannot be altered, which is critical for legal use.”

If asked “Future scope?” 👉 Say:

“We can integrate with banks and law enforcement APIs for automated fraud prevention.”
