Problem Statement/ Industry

Problem Being Solved

Our startup, ****QR Health Scanner****, aims to solve critical problems in emergency healthcare by providing instant access to essential patient information. In many emergency situations, such as accidents or when a patient is unconscious, doctors often lack immediate details like blood group, allergies, or medical history, leading to delays in treatment.

Problem Analysis

Affected Stakeholders

The lack of immediate access to medical information affects several groups, especially in emergencies. Patients, particularly those who are unconscious, elderly, or have chronic illnesses, are at high risk because doctors cannot quickly access details like blood group, allergies, or medical history. Doctors and healthcare professionals are also imp

Impact on Stakeholders

Patients are affected through delayed treatment, higher risk of complications, and even loss of life due to the absence of critical medical information during emergencies. Doctors and healthcare professionals face increased pressure and a higher chance of making errors because they must make quick decisions without complete patient data. Emergency

Root Cause

The problem exists due to several underlying root causes. One major reason is the continued reliance on **manual and paper-based medical records**, which are difficult to access quickly during emergencies. There is also a **lack of a centralized or universally accepted digital health system**, meaning patient data is scattered across different hosp

Personal/ Team Connect

As a team, we want to work on this problem because we recognize how critical timely medical information is in saving lives, especially during emergencies. We have seen situations where delays in accessing patient details caused confusion, stress, and risk for both patients and doctors. This motivated us to create a solution that can make a real dif

Jobs- to- be- Done

Functional JTBD

The functional jobs- to- be- done for the QR Health Scanner include enabling users to store their medical information digitally, such as blood group, allergies, and existing conditions, and generating a unique QR code linked to this data. The system allows quick scanning of the QR code in emergency situations to provide instant access to patient information.

Emotional JTBD

The emotional jobs- to- be- done for the QR Health Scanner focus on providing users with a sense of safety, confidence, and peace of mind. Users feel reassured knowing that their critical medical information is easily accessible during emergencies, even if they are unable to communicate. It reduces anxiety for both patients and their family members by

Social JTBD

The social jobs- to- be- done for the QR Health Scanner focus on how users want to be perceived by others and their role in society. Users want to be seen as responsible and health- conscious individuals who take proactive steps to ensure their safety and well- being. By using the system, they demonstrate preparedness for emergencies and care for their

Current Alternatives

Current Alternatives

Currently, the persona overcomes the problem through manual and less reliable methods. They may carry physical medical records, prescriptions, or health cards in their wallet or bag. Some rely on saving basic information like blood group or emergency contacts on their phone or wearing medical ID bracelets. In many cases, they depend on family membe

Gaps in Current Alternatives

The existing solutions have several limitations that make them unreliable in critical situations. Physical documents like medical records or prescriptions can be lost, damaged, or not available during emergencies. Storing information on mobile phones is also not fully dependable, as the device may be locked, out of battery, or inaccessible to docto

Our Solution

Solution

QR- Based Digital Health Scanner System – A system that generates a unique QR code for each user, which when scanned provides instant access to their essential medical information such as blood group,

Core Technologies/ Methodologies

Frontend: HTML, CSS, JavaScript (or React) Backend: Node.js / Python (Django/Flask) Database: MySQL / MongoDB QR Code Generation & Scanning: QR librar

Solution Design

Our Solution

QR- Based Digital Health Scanner System – A system that generates a unique QR code for each user, which when scanned provides instant access to their essential medical information such as blood group,

Key Features

User registration and login system
Unique QR code generation for each user
Instant QR scanning to access medical data
Secure storage of health information

Uniqueness

Provides instant access to life- saving data using a simple QR code
Low-cost and highly accessible (works on any smartphone)
Stores only a secure ID in QR, ensuring privacy
Combines simplicity with rea

Solution Benefits

Functional Benefits

Instant access to critical medical information Faster and more accurate treatment decisions Reduced time in emergencies Easy storage and updating of health records

Emotional Benefits

Peace of mind knowing data is always accessible Reduced anxiety for users and their families Increased confidence in handling emergency situations Sense of safety and preparedness

Social Benefit

Seen as a responsible and health-conscious individual Builds trust with doctors and healthcare providers Sets a positive example for others to adopt health technology Appreciation from family members

Macro Benefit

The solution improves healthcare efficiency by reducing delays and medical errors, potentially saving lives. It lowers healthcare costs by avoiding repeated tests and unnecessary procedures. It also p

Prototype

Prototype Format

The prototype will be digital. It will be developed as an interactive mobile app prototype

Functionality included in the Prototype

The QR Health App prototype will be digital, built in Figma, showing user registration, QR code generation and scanning, emergency health info, and appointment reminders, allowing stakeholders to experience

Functionality NOT included in the Prototype

The prototype will exclude advanced features such as full backend integration with hospital databases, real-time updates, cloud storage, AI-based health insights, and payment or subscription management
